## Skills

Python TypeScript node.js Express.js

Django (DRF) GraphQL Flask Next.js

Docker Kubernetes AWS GIT Azure

PostgreSQL Redis Pub/Sub WebSockets

Microservices REST Data Structures

Apache Airflow

VSCode Postman Jira Draw.io

## Education

### PG Diploma: Advance Computing

SUNBEAM INSTITUTE OF INFORMATION  
TECHNOLOGY, KARAD-PUNE

Feb 2018 – Aug 2018

### Bachelor's Degree in CSE

PROF RAM MEGHE INSTITUTE  
OF TECHNOLOGY & RESEARCH, AMRAVATI

Jul 2013 – Oct 2017

### Awards

- Above and Beyond, GS Lab (Jun 22)
- Best Ongoing Student: Sunbeam (Jul 18)
- 3x Module Topper: Sunbeam (Jul 18)

### Projects

- GitTix: Exchange Tickets! (2022)
- RBAC System
- Stock Price Notifier: Cron Work
- Online Banking System (e-banking)

## Professional Experience

### Senior Software Engineer

Apr 2021 – Present

GREAT SOFTWARE LABORATORY (GS LAB), PUNE

#### Chameleon (IaaS) – Atlas Identity Product

- Developed serverless IAM (Identity and Access Management) APIs comprising user onboarding, authentication, MFA, and account recovery.
- Implemented custom IdP (Identity Provider) to integrate with IAM platforms like Auth0, Okta, etc.
- Followed agile and test-driven approach in the development process.
- Deployed solutions on client environments; set up CI-CD pipelines.
- Prepared comprehensive documents and writeups wherever necessary.
- Provided technical support during customers' rush hour periods.

#### Davies Group's Okta GAL Sync

- Developed backend CRUD APIs for contacts based on Okta triggers to update the GAL (Global Address List) for respective domains.
- Came up with a strategy to build and manage ExO (Exchange Online) connections across the application, which led to an overall performance boost of 70%.

#### A360 AI Platform – [andromeda360.ai](https://andromeda360.ai)

- Designed and developed an in-app notifications module from scratch using Pub-Sub architecture.
- Implemented Authn over WebSocket connection to address security concerns.
- Optimized the performance and accuracy of database search queries significantly.
- Fixed open bugs and delivered on time with respect to priorities.
- Added unit tests to increase code coverage to 95%.

#### Demo Garage – Internal POC

- Developed a module (Python service) to dynamically create and schedule Apache Airflow DAGs (workflows) for execution based on provided JSON document; also it should be able to trigger the execution manually and remove it.

#### IAM with Red Hat SSO – Internal POC

- Worked on integration of an open-source SSO (Single Sign-On) platform to secure applications and services with customized JWT for authorization. Developed customized SPIs (Service Provider Interfaces) to support multiple features which weren't available out of the box.

### Project Engineer (HPC Applications)

Sep 2018 – Apr 2021

CENTRE FOR DEVELOPMENT OF ADVANCED COMPUTING C-DAC, PUNE

#### National Supercomputing Mission: NSM India – [nsmindia.in](https://nsmindia.in)

- Designed and developed secure, real-time, and near real-time APIs for C-Chakshu: Multicloud Monitoring and Management Platform
- Worked on centralized and site-specific Dashboard accessible from anywhere across CDAC's NKN (National Knowledge Network).
- Designed and developed a module to generate the 3D Model for the HPC System with integrated system alerts and information.
- Worked on the module to generate FAT Tree to represent the network Topology (InfiniBand) of the supercomputer
- Worked on CHReME: C-DAC HPC Resource Management Engine to add multiple new features and framework updates.
- Prepared comprehensive documentation for the usage and deployment of these HPC solutions.
- Deployed these solutions on Linux-based HPC systems remotely on various geo-locations across India, including IIT BHU, IITK, IITKGP, IISER Pune, etc.
- Handled HPC applications support for the clients from NABI, Mohali.
